OBJECTIVE

Seeking for an intern position in 2018 in the field of Bipedal Robotics and Optimal Control

QUALIFICATIONS

- **Robot simulation (6 years):** Simulating bipedal robots using ode solvers and physical engine-based simulators.
- **Embedded system software development and hardware implementation (3 years):** Bipedal walking experiments with integration of motion control and sensor data acquisition.
- **Optimal control (3.5 years):** Research experience about model predictive control, quadratic program-based control and trajectory optimization.

SKILLS

- **Programming and Software Package:**
(Proficient): MATLAB & Simulink, C/C++,
Mathematica, L^AT_EX,
(Experienced): LabVIEW, ROS, Git, IPOPT, MSC
ADAMS, JAVA
- **Mechanism Design and Stress Analysis:** Autodesk
Inventor, CATIA, SOLIDWORKS/Cosmos Analysis
- **Programming with Micro-controller and PCB
Design :** Intel 8051, Hitachi H8, Microchip PIC
18/30/32, OrCAD

EDUCATION

- **Texas A&M University** College Station, TX
Ph.D. Candidate in Mechanical Engineering (Robotics and Rehabilitation); Current GPA: 3.77 Aug. 2013 – Present
- **National Taiwan University** Taipei, Taiwan
M.S. in Mechanical Engineering (Robotics) Sep. 2008 – Aug. 2010
- **National Tsing Hua University** Hsinchu, Taiwan
B.S. in Power Mechanical Engineering (System and Control) Aug. 2004 – June 2008

WORK EXPERIENCE

- **MathWorks** Natick, MA
*Robotics Development Intern for **Robotics System Toolbox** (RST) May 2017 - Dec. 2017*
 - **Workspace Analysis:** Developed the prototype of workspace analysis functionalities for manipulators including kinematic and dynamic manipulability (joint limit and joint redundancy are considered), and the associated visualization with manipulability ellipsoid and manipulability map.
 - **Safe Trajectory Tracking:** Implemented impedance control with trajectory scaling on Sawyer robot (from Rethink Robotics) in the simulation and experiment (via ROS and Itera SDK) using MATLAB/Simulink and RST. Contributed the Simulink version as one feature example in RST for MATLAB 2018a.
 - **Others:** Inverse kinematic solver benchmark and software testing for algorithms about 3-D occupancy grid map.
- **IHMC Robotics Lab** Pensacola, FL
Software Intern May 2018 - Aug. 2018
 - **Stability Analysis of SLIP-based Models for Fast Runners:** Built simulation with simplified model using Simulation Construction Set (Java) for simple fast running robots, and developed MATLAB API using direct shooting method to search limit cycles of those robots across different parameters and running speed, and identified the stable limit cycles.

RESEARCH EXPERIENCE

- **Texas A&M University** College Station, TX
Research Assistant in Human Rehabilitation Group Jan. 2015 - Present
 - **Trajectory Optimization for Walking Motion Generation:** Developing methods using trajectory optimization with direct collocation for walking with multiple contact conditions, and for robust compass gait with LQR control.
 - **Biomechanical Analysis of Human Walking with Slip Using Instantaneous Capture Point (ICP):** Analysis of stepping location estimation using ICP for various robotic walkers and humans walking with slip under different severities.

- **Bipedal Walking Experiments:** Conducting bipedal walking experiments on the bipedal robot AMBER 3 for zero-moment point (ZMP)-based walking and multi-contact walking.

- **Texas A&M University** College Station, TX
Graduate Assistant in AMBER Lab July 2014 - June 2015
 - **Quadratic Program-based Control:** Developed an optimal controller with Control Lyapunov Function unifying Center of Mass (COM) planning (using model predictive control) and locomotion control into a single framework.
- **National Taiwan University** Taipei, Taiwan
Research Assistant Feb. 2012 - May 2013
 - **IK Solver for Singular Configuration:** Designed a real-time IK solver combined Jacobian method with Cyclic Coordinate Descent (CCD) which is capable of solving motions with stretching limbs.
 - **Human-like Walking Motion Generation:** Using the developed IK solver, generated the walking motion with human walking features (knee stretching and foot rolling motion) and tested in the experiment.
 - **Computed Torque Control of Bipedal Walking Experiment via EtherCAT:** Upgraded the electrical system of Nino's bipedal mechatronics, and implemented computed torque control with sliding mode control for walking upstairs and downstairs.
- **National Taiwan University** Taipei, Taiwan
Graduate Student Sep. 2008 - Aug. 2010
 - **Bipedal Mechanism Design for a Humanoid Robot – Nino:** Designed and performed stress analysis of a 12-DOF bipedal mechanism with a 2-DOF trunk mechanism for a human-sized humanoid robot – Nino.
 - **Development of Distributed Electrical System for Nino:** Developed the firmware and the control boards with micro-controllers for Nino's distributed electrical system via CAN bus and USB.
 - **Gait Coordination Control:** Using filtered ground reaction force and trajectory generation for end-effector and COM, designed a controller to improve the adaptiveness of bipedal walking under unknown stepping height.

UNDERGRADUATE PROJECTS

- **2-DOF Biomimetic Robotic Fish:** Designed and developed a robotic fish with flexible, waterproof skin made from silicone rubber. The robotic fish can perform 2D motion under remote control via Bluetooth.
- **Automatic Page-flipping Machine:** Designed and developed the mechatronic system with a micro-controller and two servo motors. The machine can perform page flipping for common books (no customization required).

HONORS AND AWARDS

- **Texas A&M University Graduate Student Travel Award, 2017:** Award granted for attending IROS 2017.
- **Studying Aboard Scholarship, 2015–2016:** Taiwan government scholarship for outstanding students to pursue graduate study abroad.
- **Charles Crawford '19 Fellowship, 2013:** Fellowship from Mechanical Engineering Department at Texas A&M Granted with Admission.
